karthikeyan2410450@ssn.edu.in

Chennai, India

Hobbies

- Playing Chess • Drawing
- Badminton • Coding
- Learning Japanese

Languages

- English (Proficient)
- Tamil (Proficient)

Skills

Programming Languages

- Python • C • Java

Web & Application Development

- HTML • CSS • Typescript
- JavaScript • Flutter(Basic)
- CSS • Tailwind CSS

DataBase

- MySQL • Oracle

Tools & Platforms

- GitHub • n8n • Visual Studio Code
- Android Studio • Quartus
- Canva • Firebase

Soft Skills

- Time Management • Team Lead
- Problem Solving

Platforms

About Me

Active Computer Science Engineering student with strong foundations in programming, data structures, and software development. Demonstrated leadership experience as a team lead across multiple academic and project teams, effectively coordinating tasks and driving timely execution. Consistently practices problem-solving on competitive programming platforms and seeks an opportunity to contribute, learn, and grow as a dedicated IT professional. Known for working tirelessly, meeting deadlines, and learning continuously from mistakes.

Education

B.E. Computer Science and Engineering

2024 - 2028

Sri Sivasubramaniya Nadar College of Engineering | Chennai

CGPA: 8.901 out of 10

Internship

Full Stack Developer Intern

Ardent Computech Pvt Ltd, Kolkata (ISO 9001:2015 Certified)

Jun 2025 – Jul 2025

- Developed NutriGo, an online food ordering system using MERN stack.
- Integrated Razorpay, Firebase, Cloudinary, and OpenStreetMap.
- Worked on API integration, real-time order tracking, and user-friendly UI.
- Contributed to project documentation, testing, and team collaboration.

Project: NutriGo – Online Food Ordering Management System

GitHub: NutriGo (Opensource project)

Projects

CipherGuard-Encrypter cum Decrypter (Java)

A Java-based cryptography tool for secure text and file encryption

- Designed and implemented a console application to encrypt and decrypt text and files using Caesar, XOR, and Substitution ciphers
- Applied core OOP principles including inheritance, polymorphism, and encapsulation, along with file I/O and custom exception handling
- Implemented operation logging to maintain an audit trail of encryption and decryption activities

Task & Habit Tracker (Flutter)

Gamified productivity application with task and habit tracking.

- Implemented full authentication system with Google Sign-In and anonymous guest mode using Firebase Authentication
- Built multi-module tracking system featuring task management, habit formation (with streak tracking), and digital diary with mood monitoring
- Designed gamification mechanics including points system, level progression (Bronze→Diamond), achievements, and reward incentives for user engagement

Air Traffic Scheduling (C)

Comprehensive air traffic management simulation with GUI & SQL

- Implemented advanced scheduling algorithms including priority-based runway assignment, conflict detection, and dynamic rescheduling
- Built interactive GTK+ interface with tabbed navigation for flight monitoring, crew assignments, emergency management, and comprehensive reporting
- Integrated SQLite database for persistent storage of flight records, crew schedules, runway usage, and operational data with transaction management

Quiz Application (C)

Quiz management system with admin and student interfaces

- Implemented complete CRUD operations allowing admin to create, view, edit, and delete quiz questions with persistent binary file storage
- Designed interactive quiz interface featuring timed questions, randomized selection, and real-time scoring with immediate feedback
- Built secure authentication system with distinct admin login and student registration workflows with input validation
- Managed complete application lifecycle including score tracking, file I/O operations, and smooth state transitions across multiple screens

Number Match Game (Python)

2-level memory and math puzzle game using Python & Pygame

- Implemented dual game mechanics featuring number pair matching and sum challenge modes to test cognitive and mathematical skills
- Designed interactive UI with gradient backgrounds, color-coded cells, and real-time score/timer displays across multiple game states
- Engineered grid generation algorithms that create randomized number distributions with guaranteed solvable pairs and sum combinations
- Built persistent high-score tracking using file I/O operations and managed complete game lifecycle from start to completion
